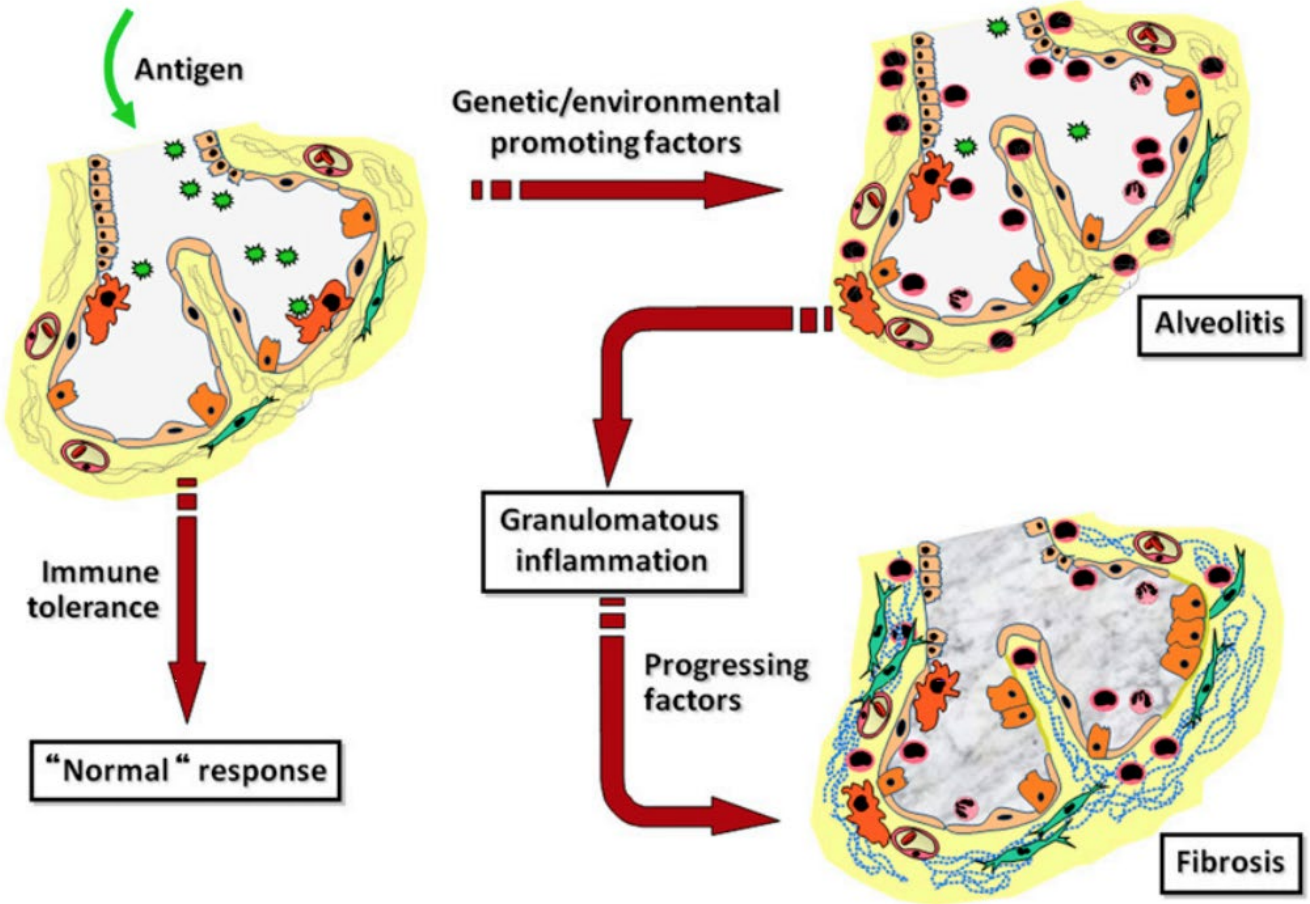
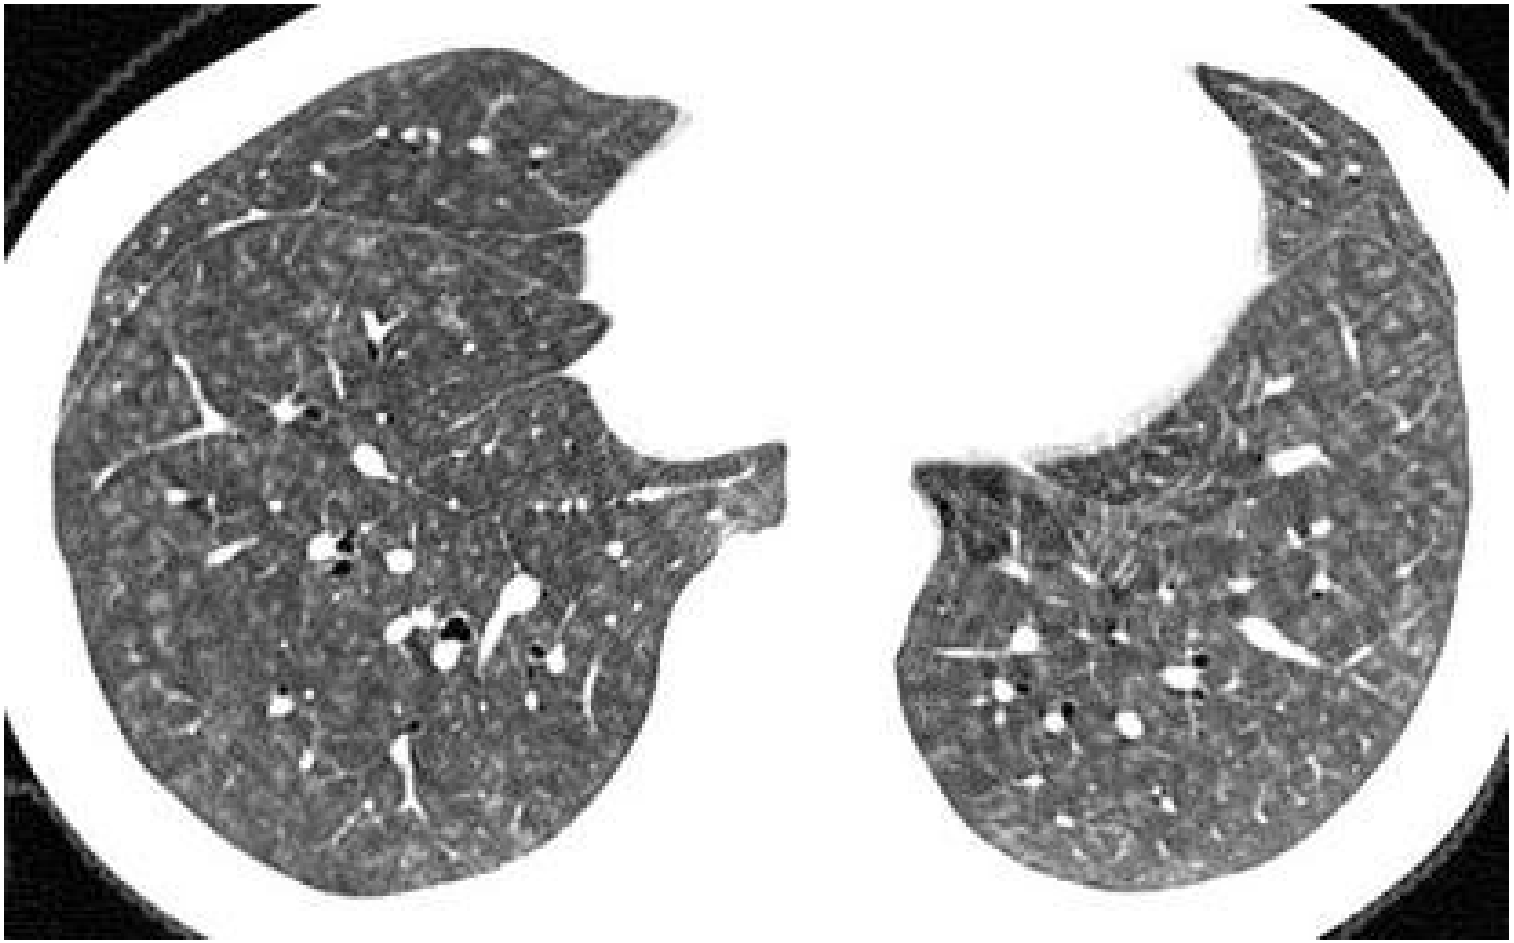
Hypersensitivity pneumonitis - pathogenesis

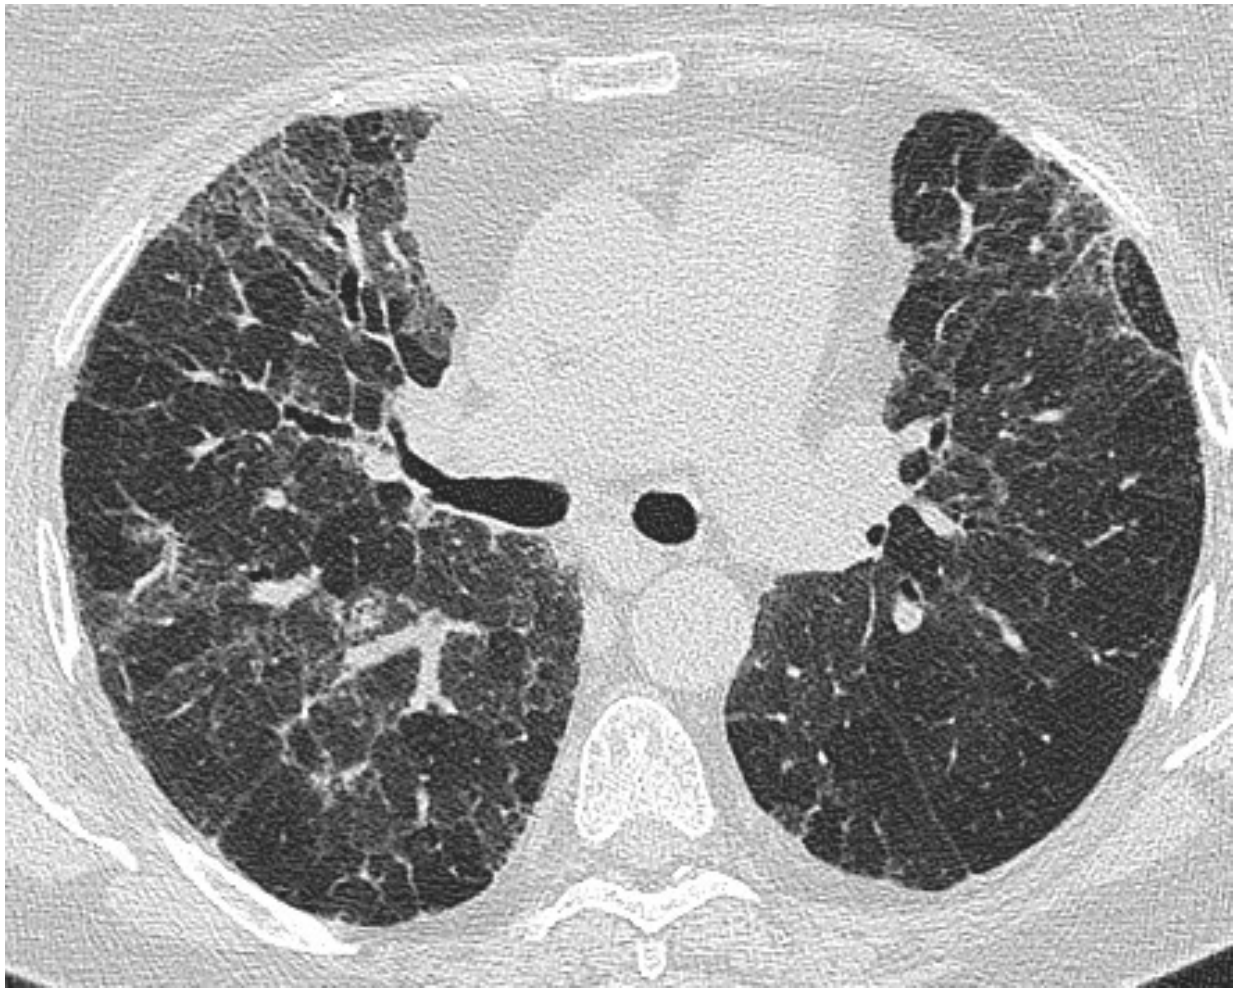


Selman et al AJRCCM 2012

Acute hypersensitivity pneumonitis



Chronic hypersensitivity pneumonitis



Assessment of suspected HP

- History
  - Exposure

Disease	Antigen	Source
Fungal and bacterial		
Farmer's lung	*Saccharopolyspora rectivirgula*	Moldy hay, grain, silage
Ventilation pneumonitis; humidifier lung; air conditioner lung	*Thermoactinomyces vulgaris, Thermoactinomyces sacchari, Thermoactinomyces candidus, Klebsiella oxytoca*	Contaminated forced-air systems; water reservoirs
Bagassosis	*T. vulgaris*	Moldy sugarcane (i.e., bagasse)
Mushroom worker's lung	*T. sacchari*	Moldy mushroom compost
Enoki mushroom worker's lung (Japan)	*Penicillium citrinum*	Moldy mushroom compost
Suberosis	*Thermoactinomyces viridis, Aspergillus fumigatus, Penicillium frequentans, Penicillium glabrum*	Moldy cork
Detergent lung; washing powder lung	*Bacillus subtilis* enzymes	Detergents (during processing or use)
Malt worker's lung	*Aspergillus fumigatus, Aspergillus clavatus*	Moldy barley
Sequoiosis	*Graphium, Pullularia, and Trichoderma* spp., *Aureobasidium pullulans*	Moldy wood dust
Maple bark stripper's lung	*Cryptostroma corticale*	Moldy maple bark
Cheese washer's lung	*Penicillium casei, A. clavatus*	Moldy cheese
Woodworker's lung	*Alternaria* spp., wood dust	Oak, cedar, and mahogany dust, pine and spruce pulp
Hardwood worker's lung	*Paecilomyces*	Kiln-dried wood
Paprika slicer's lung	*Mucor stolonifer*	Moldy paprika pods
Sauna taker's lung	*Aureobasidium* spp., other sources	Contaminated sauna water
Familial HP	*B. subtilis*	Contaminated wood dust in walls
Wood trimmer's lung	*Rhizopus* spp., *Mucor* spp.	Contaminated wood trimmings
Composter's lung	*T. vulgaris, Aspergillus*	Compost
Basement shower HP	*Epicoccum nigrum*	Mold on unventilated shower
Hot tub lung	*Mycobacterium avium complex*	Hot tub mists; mold on ceiling
Wine maker's lung	*Botrytis cinerea*	Mold on grapes
Woodsman's disease	*Penicillium* spp.	Oak and maple trees
Thatched roof lung	*Saccharomonospora viridis*	Dead grasses and leaves
Tobacco grower's lung	*Aspergillus* spp.	Tobacco plants
Potato riddler's lung	*Thermophilic actinomycetes, S. rectivirgula, T. vulgaris, Aspergillus* spp.	Moldy hay around potatoes
Summer-type pneumonitis	*Trichosporon cutaneum*	Contaminated old houses
Dry rot lung	*Merulius lacrymans*	Rotten wood
Stipatosis	*Aspergillus fumigatus; T. actinomycetes*	Esparto dust
Machine operator's lung	*Mycobacterium immunogenum; Pseudomonas fluorescens*	Aerosolized metalworking fluid
Residential provoked pneumonitis Amebae	*Aureobasidium pullulans*	Residential exposure
Humidifier lung	*Naegleria gruberi, Acanthamoeba polyphaga, Acanthamoeba castellani, Bacillus* sp., others	Contaminated water from home humidifier, ultrasonic misting fountains
Shower curtain disease	*Phoma violacea*	Moldy shower curtain
Animal proteins		
Pigeon breeder's or pigeon fancier's disease	Avian droppings, feathers, serum	Parakeets, budgerigars, pigeons, chickens, turkeys
Pituitary snuff taker's lung	Pituitary snuff	Bovine and porcine pituitary proteins
Fish meal worker's lung	Fish meal	Fish meal dust
Bat lung	Bat serum protein	Bat droppings
Furrier's lung	Animal fur dust	Animal pelts
Animal handler's lung; laboratory worker's lung	Rats, gerbils	Urine, serum, pelts, proteins
Insect proteins		
Miller's lung	*Sitophilus granarius* (i.e., wheat weevil)	Dust-contaminated grain
Lycoperdonosis	Puffball spores	Lycoperdon puffballs

Selman et al AJRCCM 2012

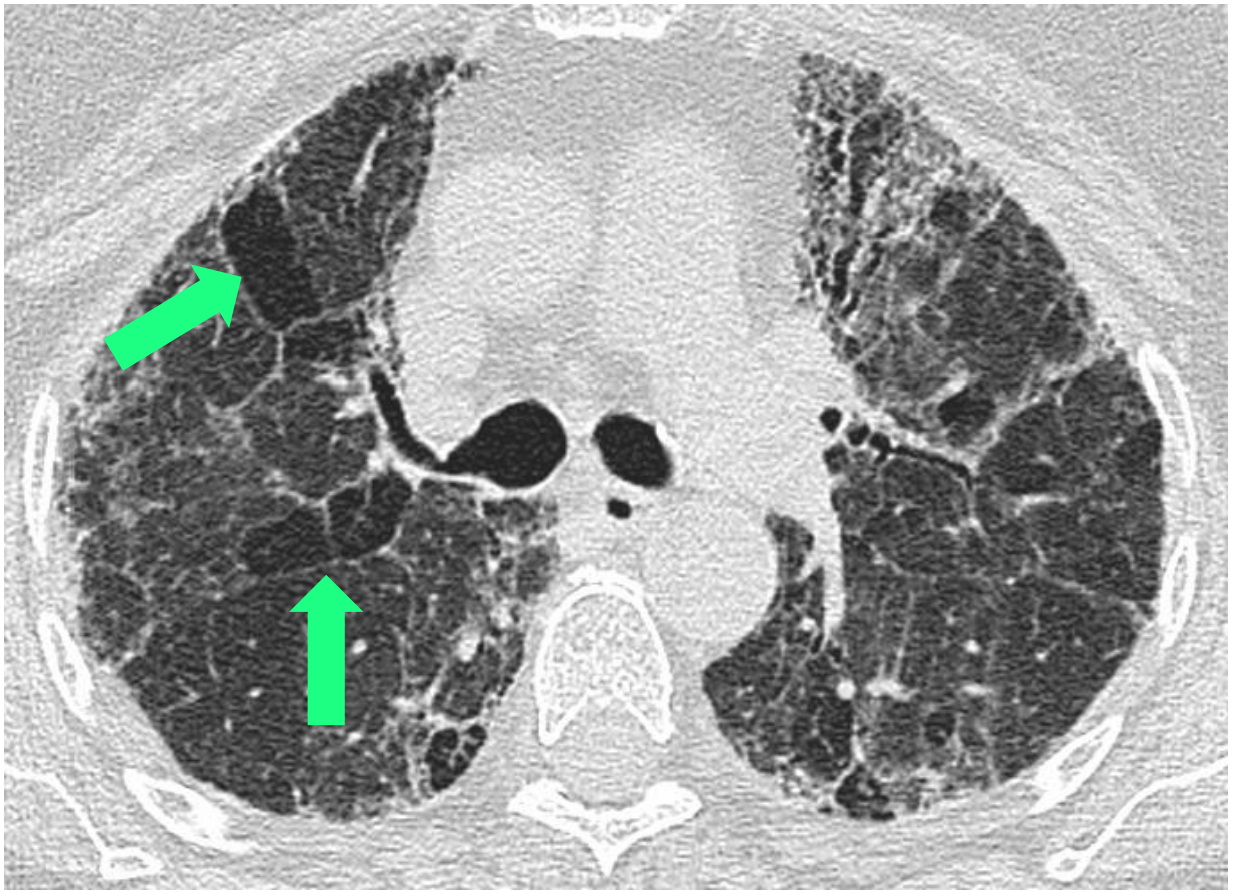
Assessment of suspected HP

- History
  - Exposure
  - But 60% lack clear exposure
- Examination
  - “Squawks” on auscultation
- Imaging
  - Acute – centrilobular nodules, ground glass +/- gas trapping
  - Chronic – fibrosis, mosaicism, bronchocentric distribution

HRCT pointers to chronic hypersensitivity pneumonitis

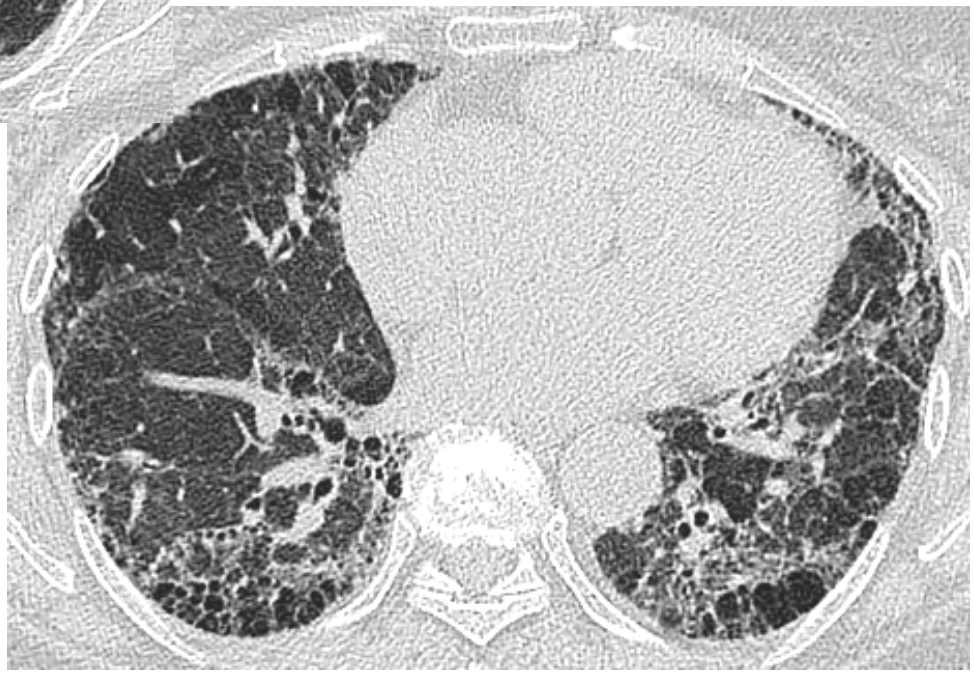
- Lobules of decreased attenuation ***in spared (non-fibrotic) lung***
- Unusual distribution of fibrosis, particularly ***vague bronchocentricity in upper lobes***
- Coexistent subacute changes - indistinct relatively low attenuation centrilobular nodules ***(rare)***

Lobules of decreased attenuation in spared lung



Unusual distribution of fibrosis, particularly vague bronchocentricity in upper lobes

Chronic hypersensitivity with UIP features



Assessment of suspected HP

- History
  - Exposure
  - But 60% lack clear exposure
- Examination
  - “Squawks” on auscultation
- Imaging
  - Acute – centrilobular nodules, ground glass +/- gas trapping
  - Chronic – fibrosis, mosaicism, bronchocentric distribution
- Bronchoscopy
  - Lymphocytes >?20%
- Biopsy
  - Airway centred granulomata, chronic cellular bronchiolitis, chronic interstitial inflammatory cell infiltrate
- Blood testing
  - Specific circulating antibodies

Case History

- 55 year old practising primary care physician
- 6 months mild exertional dyspnoea
- No exposures
- Lifelong non-smoker
- No clubbing
- Occasional bibasal crepitations

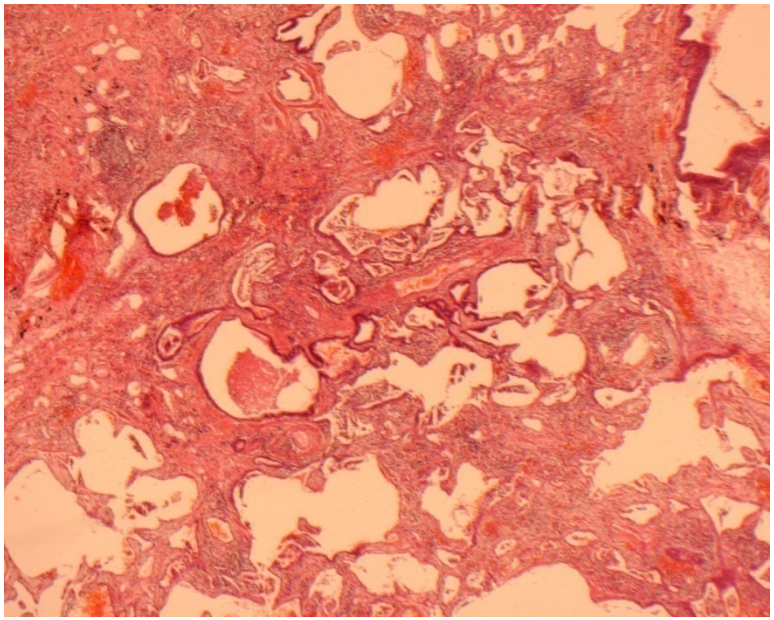
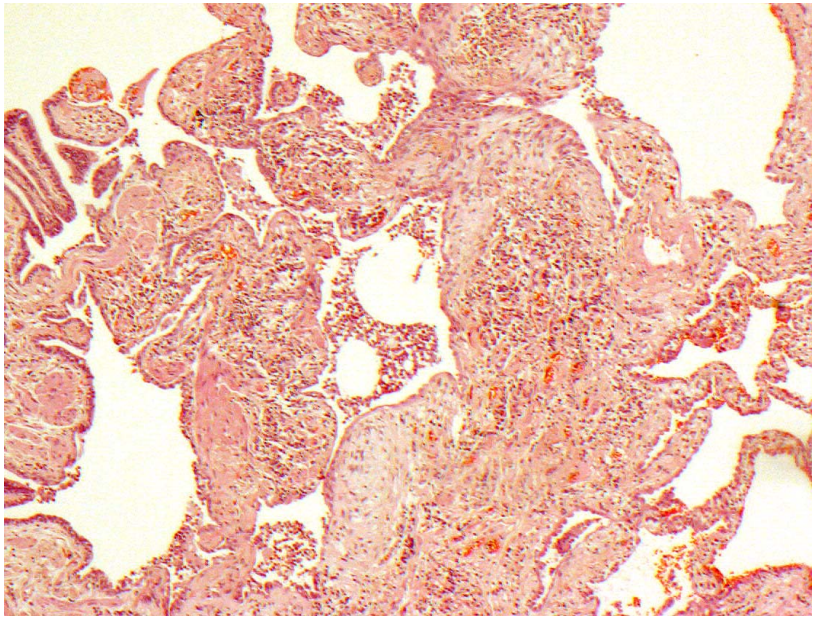
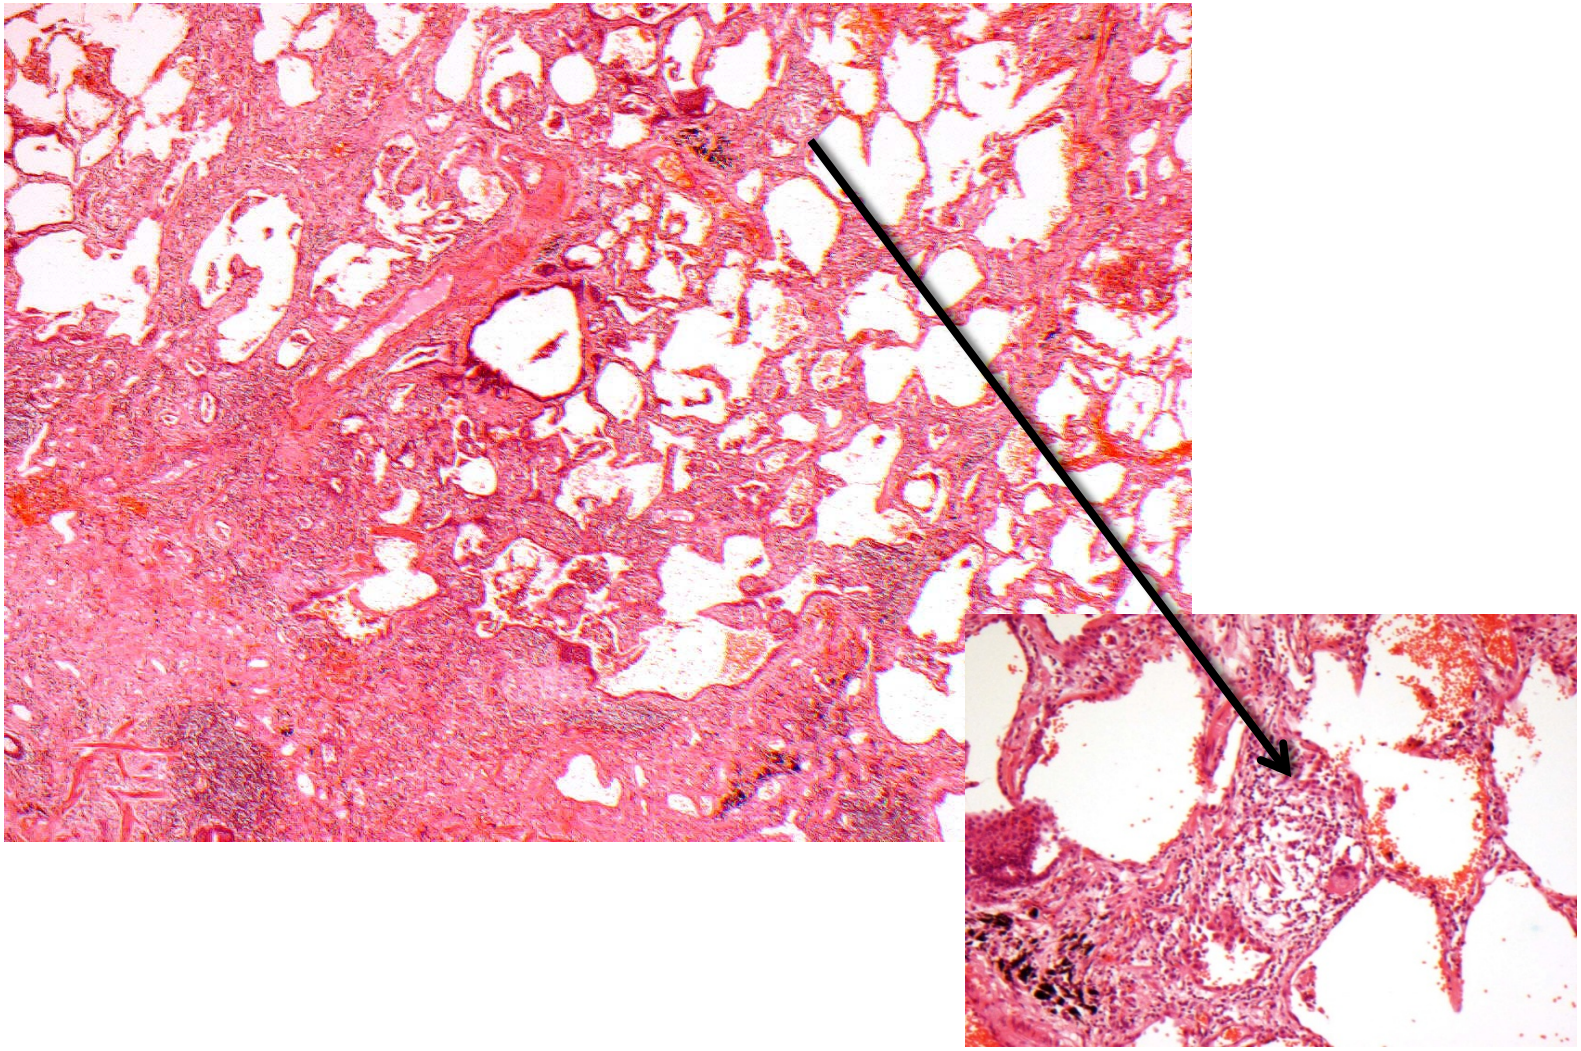
Surgical Lung Biopsy





Surgical Lung Biopsy

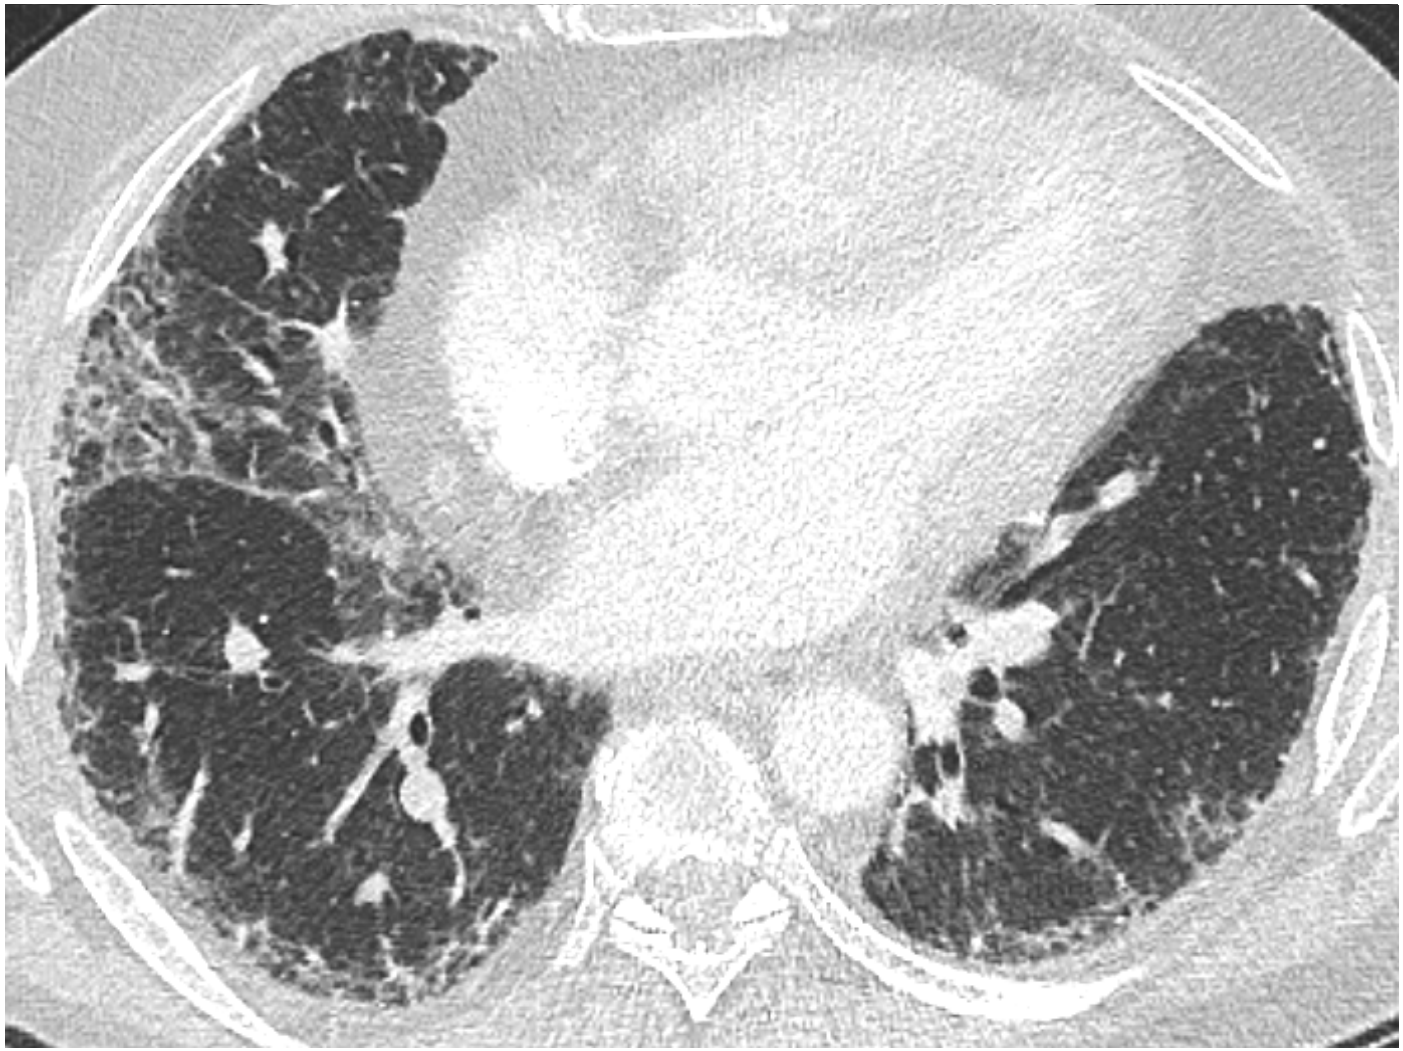


Follow up

- MDT diagnosis – probable fibrotic hypersensitivity pneumonitis

Follow up

- Diagnosis – probable fibrotic hypersensitivity pneumonitis
- Treated with intravenous methylprednisolone followed by prednisolone 10 mg daily, azathioprine 150 mg daily and NAC
- After 12 months, worsening breathlessness and 14% decline in FVC



Follow up

- Diagnosis – probable fibrotic hypersensitivity pneumonitis
- Treated with intravenous methylprednisolone followed by prednisolone 10 mg daily, azathioprine 150 mg daily and NAC
- After 12 months, worsening breathlessness and 14% decline in FVC
- Repeat bronchoscopy – 28% lymphocytes

Follow up

- Diagnosis – probable fibrotic hypersensitivity pneumonitis
- Treated with intravenous methylprednisolone followed by prednisolone 10 mg daily, azathioprine 150 mg daily and NAC
- After 12 months, worsening breathlessness and 14% decline in FVC
- Repeat bronchoscopy – 28% lymphocytes
- Treatment changed to intravenous cyclophosphamide 600 mg/m^2 body surface area every 4 weeks for 6 doses.

Follow up lung function

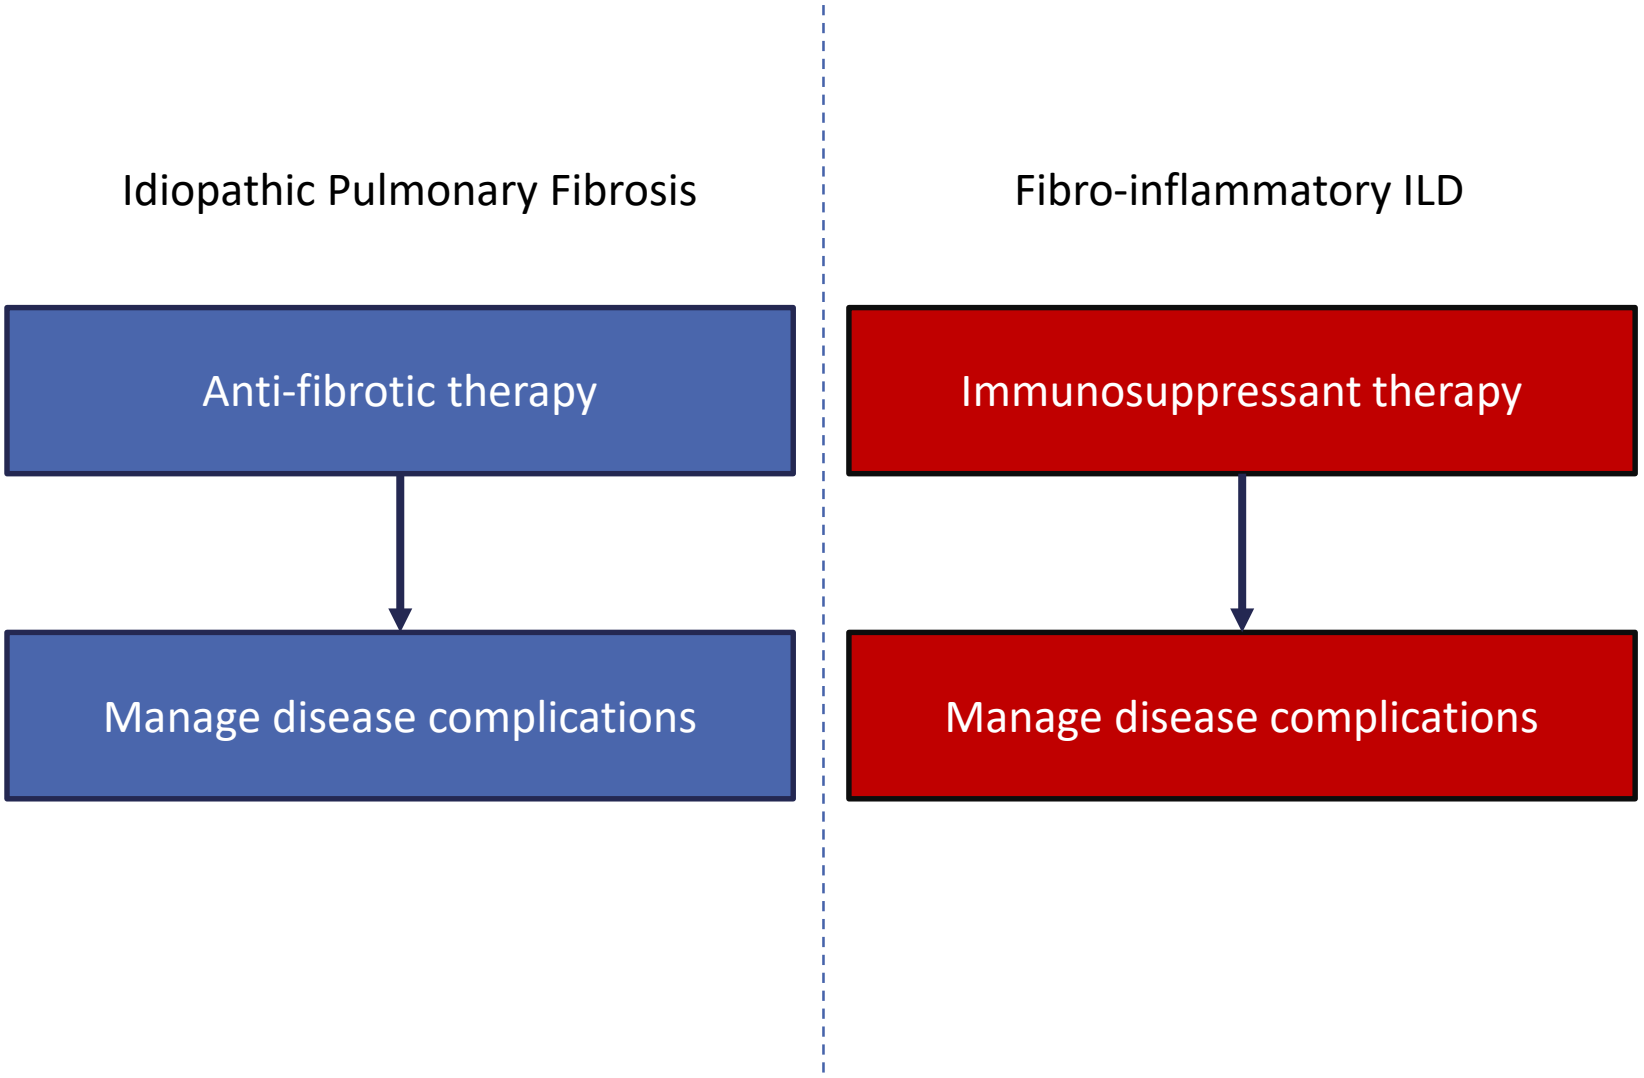
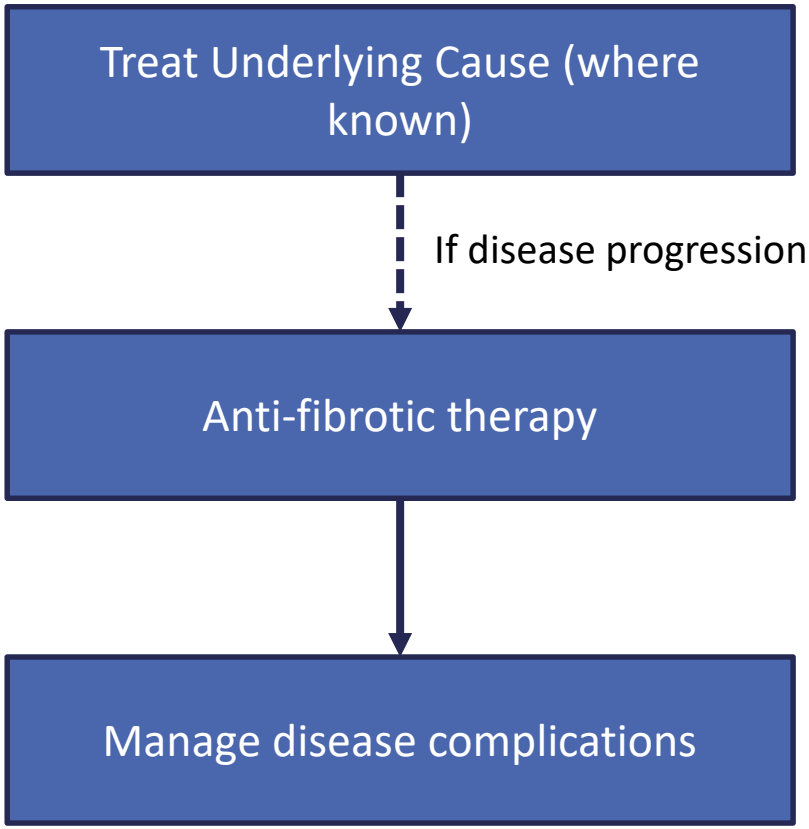
Transplant

Current treatment paradigm



The future treatment of fibrotic ILD?



Summary

- Chronic hypersensitivity pneumonitis is frequently challenging to diagnose
- A proportion of cases overlap with IPF in terms of disease behaviour and outcome
- Absence of lymphocytosis predicts a poorer outcome and response to treatment
- Best therapy remains to be defined but is likely to be corticosteroids +/- immunosuppressant therapy
- The outcome of trials with anti-fibrotic drugs are awaited

Questions?
